Please don't use alldata crack - it is not supported as this is the one by the developer, which is not available for general public. We are not responsible for damage or any other case. Thanks for using the alldata.net Codes will be shared soon. NOV 2017 (due to DMCA Law) Please visit below Thanks again A: THAT'S WHERE IT CAME FROM First of all we need to find out how the cracked version is different to the one we got through the installer. Here is a screenshot of the crack in WinRAR (the one you downloaded), when I opened it I got the message that the file is corrupted. So we need to find out which type of corruption the crack has. I've had a quick read of the contents and there is no.exe, no.dll, no.reg, no.txt and no.scr file. There is an.iso file which is the installer for Alldata 2010. I've opened this and it is a real installer file, not a cracked one. We can't assume a crack is there as the cracked version of 10.52 doesn't exist. You downloaded the wrong file. Please have another look through it and find out exactly what you're looking for. I've got the incorrect version of the AllData install for 10.52. It's not broken, it just doesn't contain the crack that you downloaded. You can download the correct version from the author's website here. (There is no need to use the torrent option to download, you just select 'Direct Download' and it'll show you the correct version.) YESTERDAY IT WAS VERY SIMILAR (NO LONGER AVAILABLE) Here's the (very) similar AllData 2010 crack. Please read my answer above for what this is. THAT'S WHERE IT CAME FROM You need to read my first answer in the order you've done the questions. Firstly I have to find out how the cracked version of the Alldata 2010 installer differs to the one we got through the installer. If you read my first answer you will see that the cracked version has no.exe f678ea9f9e
